ABSTRACT

A study was conducted at College of the Sequoias (COS) to assess the academic success of students transferring to California State University, Fresno (Fresno State), and California Poly-Technic State University, San Luis Obispo (Cal-Poly). The study focused on the number of units completed at COS, grade point average (GPA) at COS, COS units accepted at the transfer institution, present class level, units completed at the transfer institution, transfer GPA, and student major. Study findings, based on data on 65 Fresno State students and 14 Cal-Poly students, included the following: (1) Cal-Poly accepted 93%-94% of all courses taken at COS, while Fresno State accepted 85%-90%; (2) overall, the GPA of COS students dropped somewhere from .3 to .5 grade points after transferring; (3) students experienced a larger drop in GPA at Cal-Poly than at Fresno State; and (4) students transferring to the Social Science Department at Fresno State experienced a slight increase in GPA. The bulk of the study report consists of data tables and graphs illustrating data on the transfer students. (AYC)

INTRODUCTION

To determine the overall effectiveness of our academic program at College of the Sequoias and the subsequent success of students at the California State University and College System, the following study was conducted.

Institutional Research staff received reports of student progress from all California State Universities and Colleges that former COS students are currently attending. California State University, Fresno, and California Poly-Technic State University, San Luis Obispo, included all of the elements on their student progress reports that were used in the study; namely, number of units completed at COS; grade point average at COS; COS units accepted by the institution; present class level; units completed at the institution; grade point average at the institution (not cumulative); plus or minus difference in grade point average; and the student's major.

California State University, Fresno, and California Poly-Technic State University, San Luis Obispo, were selected for this study since they had large enough former COS student populations to give us a sufficient sample size. This study involved 65 students from California State University, Fresno, and 14 students from California Poly-Technic State University, San Luis Obispo, giving us a total number (N) of 79.

BEST COPY AVAILABLE

PROCEDURE SAMPLE SELECTION

A 10% sample of students was randomly selected from the Student Progress Reports of California State University, Fresno, (containing 651 students) and California Poly-Technic State University, San Luis Obispo (containing 138 students) for a total number (N) of 79. A sample of the elements contained in those progress reports is shown below.

ANALYSIS

Units accepted by California State University, Fresno (hereafter referred to as "Fresno") and California Poly-Technic State University, San Luis Obispo (hereafter referred to as "Cal-Poly") were evaluated, based on the students' grade point average prior to transfer. Analysis of the findings indicates that Cal-Poly accepted 93-94% of all courses taken at COS, whereas Fresno accepted 85-90%. Many factors contributed to the number of units accepted by the four-year Universities and can be related either to any remedial courses taken to eliminate deficits or students changing from non-transfer to transfer programs. The overall effectiveness of our transfer program and acceptance of units is extremely high given all of the variables.

Further analysis compares the COS grade point average by major and the subsequent grade point average at either Fresno or Cal-Poly. The initial findings indicate that, overall, the grade point average of COS students drop somewhere from .3 to .5 grade points after transferring. The one exception was in the Social Science Department where there was a slight increase in transfer grade point average at Fresno. This would indicate that the majority of our students, although dropping slightly in their grade point average when transferring to a four-year school, are maintaining their overall grade point average given the following factors:

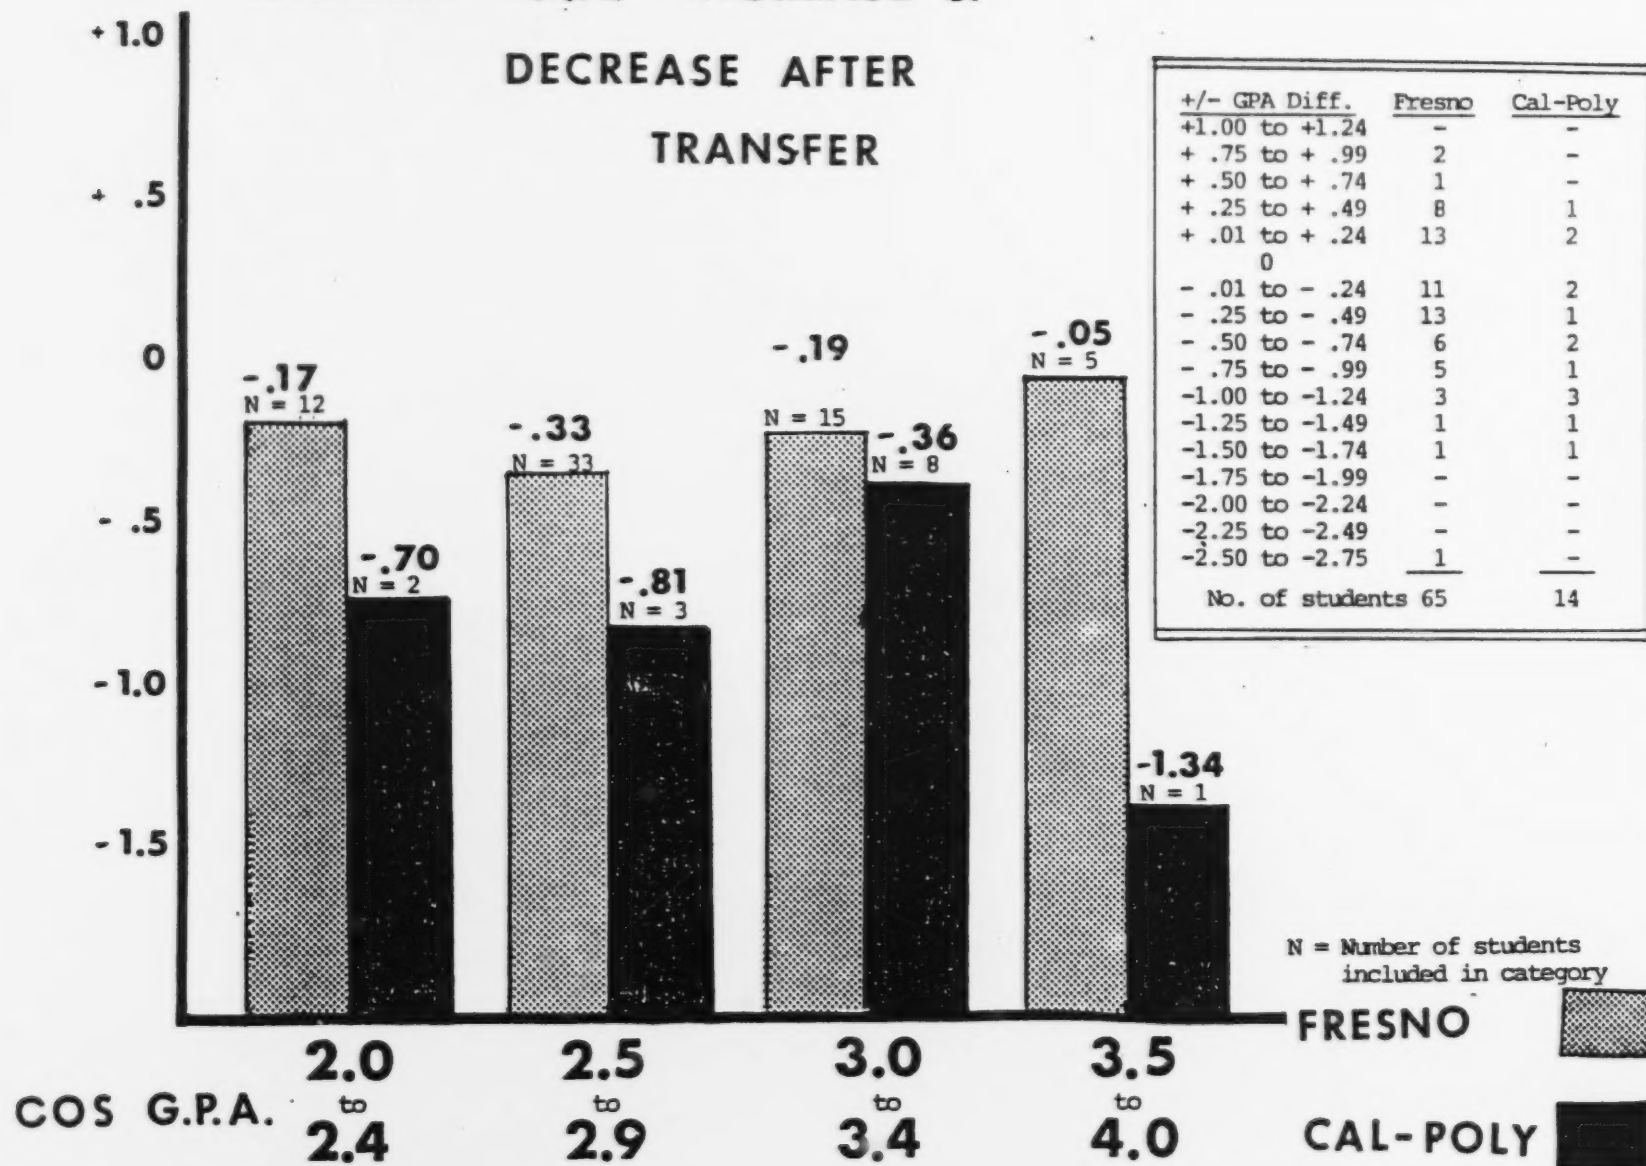

- 1) relocation for many of the students
- 2) change in class size
- 3) social activity, etc.

Overall, the findings indicate former COS students are making a relatively easy transition in meeting the increased demands.

Examination of the average grade point increase or decrease after transfer, indicates that there is a larger drop in the average GPA at Cal-Poly than experienced at Fresno. Again, consideration should be taken that we used a random sample and relative small N's can occur and would occur in subsequent breakdown for analysis. So, drawing any concrete analysis should take these facts into account.

Also included is a breakdown by student and major (for both institutions), giving complete analysis of the number of units and grade point average at COS, units accepted by Fresno or Cal-Poly, the student's current class level, number of units accepted by the institution, Fresno or Cal-Poly grade point average (not cumulative), and the increase or decrease in grade point average after transfer. This analysis was done for all individuals included in our sample and if there are any particular students' names desired by any divisions, we will be happy to share that information on an individual basis.
